                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Parathyroid hormone/parathyroid hormone-related protein (PTH/PTHrP) receptors (R92275 and R92776) are encoded by cDNA clones OK-H (T15945) and OK-O (T15946), respectively, isolated from an opossum kidney (OK) cell cDNA library. OK-H and OK-O may be the products of 2 separate genes or of a laboratory artifact. The receptor induces an increase in intracellular cAMP and calcium when challenged with PTH or PTHrP. Recombinant receptors can be produced in vector/host cell systems and
                                                                                                                                                                                            Gaps
using the protein prod. and DNAs homologous to PTH DNA can be identified using fragments of the clone as probes. The protein may be used for the prodn. of antibodies useful for the treatment, classification, prognosis and/or treatment of disorders related to the interaction between a call receptor and a ligand such as in hypercalcaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               useful for

-1- FUNCTION: THIS IS A RECEPTOR FOR CALCITONIN GENE-RELATED PEPTIDE TYPE I. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY G PROTEINS WHICH ACTIVATE ADENYLYL CYCLASE (BY SIMILARITY).
-1- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
-1- SIMILARITY: BELONGS TO FAMILY 2 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          POTENTIAL. CALCITONIN GENE-RELATED PEPTIDE TYPE 1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FUNCTION: THIS TARGEBROR FOR PARATHYROID HORMONE AND FOR PARATHYROID HORMONE-RELATED PEPTIDE. THE ACTIVITY OF THIS PRECEPTOR IS MEDIATED BY G PROFEINS WHICH ACTIVATE ADENYLYL CYCLASE AND ALSO A PHOSPHATIDYLINOSITOL-CALCIUM SECOND MESSENGER SYSTEM (BY SIMILARITY).

SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

SIMILARITY: BELONGS TO FAMILY 2 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

-i- FUNCTION: THIS IS A SPECIFIC RECEPTOR FOR PARATHYROID HORMONE. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY G PROTEINS WHICH ACTIVATE ADENIVILY CYCLASE. PTHR2 MAY BE RESPONSIBLE FOR PH EFFECTS IN A NUMBER OF PHYSIOLOGICAL SYSTEMS. IT MAY PLAY A SIGNIFICANT ROLE IN PANCREATIC FUNCTION. PTHR2 PRESENCE IN NEURONS INDICATES THAT IT MAY FUNCTION AS A NEUROTRANSMITTER RECEPTOR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Usdin T.B., Bonner T.I., Harta G., Mezey E.;

FOUND AS WELL IN SPERM, IN THE HEAD OF THE PEDILIDYNIS. LOWER EXPRESSION IS FOUND IN VASCULAR SMOOTH MUSCLE, EXOCRINE PANCREAS, TESTIS AND PLACENTA.
SIMILARITY: BELONGS TO FAMILY 2 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                EXTRACELLULAR (POTENTIAL).

calcitonin receptor clb precursor - rat
C;Species: Rattus norvegicus (Norway rat)
C;Species: Rattus norvegicus (Norway rat)
C;Date: 02-Aug-1996 #sequence_revision 02-Aug-1996 #text_change 11-Jan-2000
C;Accession: I60800; S33747
R;Sexton, P.M.; Houssani, S.; Hilton, J.M.; O'Keeffe, L.M.; Center, R.J.; Gillespie, Mol. Endocrinol. 7, 815-821, 1993
A;Title: Identification of brain isoforms of the rat calcitonin receptor.
A;Reference number: A37430; MUID:93368608
A;Accession: I60800.
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Molecule type: mRNA
A;Residues: 1-515 cRES.
A;Cross-references: GB:L13040; NID:9294532; PIDN:AAA03031.1; PID:9294533
R;Albrandt, K.; Mull, E.; Brady, E.M.G.; Herich, J.; Moore, C.X.; Beaumont, K. FEBS Lett. 325, 225-232, 1993
A;Title: Molecular cloning of two receptors from rat brain with high affinity for sal A;Reference number: S33746; MUID:93307500

The receptor protein can be used for determining the presence or amount of or separating Clb receptor binding compounds in a sample. They can also be used for producing antibodies. The receptor protein is especially used for identifying calcitonin, amylin or CRPP agonists or antagonists for treating conditions such as obbesity, anorexia, pain, diabetes mellitus impaired glucose tolerance or insulin resistance.
  treating e.g. obesity, anorexia, pain, diabetes mellitus or insulin resistance

The clone encodes a protein which may be used in a reduce the level of calcium in the blood. Cpds. capable of competing with PTH or PTHTP for binding can be identified using the protein prod. Come as probes. The sequence may be used for the protein prod. Clone as probes. The sequence may be used for the prodn. of antibodies useful for the treatment, classification, prognosis and/or treatment of closed in hypercalcaemia. See also R27704-16.

The receptor protein can be used for determining the presence or amount of or separating clb receptor binding compounds in a sample. They can also be used for producing antibodies. The receptor protein is especially used for identifying calcitonin, amylin or CRPP agonists or antagonists for treating conditions such tolerance or insulin resistance.

A human parathyroid hormone/parathyroid hormone-related protein (PTH/PPHTP) receptor (R02278) is encoded by CDNA clone HK-1 (T15948) isolated from a human kidney CDNA library. The receptor induces an increase in intracellular cAMP and intracellular free calcium when challenged by PTH or PTHTP. Recombinant receptor can be produced in vector/host cell systems and used in the treatment, diagnosis or prognosis of e.g. hypercalcaemia and hypocalcaemia, to screen for (art)agonists and to raise antibodies. Host cells expressing the receptor can be used for diagnostic measurement of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Parathyroid hormone receptor; PTH receptor; antibody; therapy; PTH-related hypercalcaemia; human.

                                                                                                                                                                                                                                         This sequence represents the rat parathyroid hormone (PTH) receptor R15B, which is targeted by the antibody of the invention. The antibody of the invention is immunoreactive with naturally occurring human, rat or opossum PTH receptor. The antibody is useful for treating disorders characterised by overstimulation of PTH receptors by their ligand and for the diagnosis of PTH-related hypercalcaemia.

This sequence represents the human parathyroid hormone (PTH) receptor which is targeted by the antibody of the invention. The antibody of the invention is immunoreactive with naturally occurring human, rat or opossum PTH receptor. The antibody is useful for treating disorders characterised by overstimulation of PTH receptors by their ligand and for the diagnosis of PTH-related hypercalcaemia.
                                                                                                                                                                                                                                                                                                                                                                                                       Length 593;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δy
                                 protein (PTH/PTHFP) receptor protein sequence was deduced from close R158 obtd. by screening a rat osteosarcoma (ROS) cell cDNA library colsolate those expressing functionally intact PTH/PTHFP receptor proteins, performed according to Gearing et al., (EMBO J. 8: 3676, 1989), by identifying colonies capable of binding a suitable radiolabelled ligand. The protein may be used in a therapeutic compan. to inhibit activation of PTH or PTHFP and thus reduce the level of calcium in the blood. Cpds. capable of competing with PTH or PTHFP for binding can be identified using the protein and DNAs homologous to PTH DNA can be identified using fragments of the clone as probes. The sequence may be used for the prodin of antibodies useful for the treatment, classification, prognosis and/or treatment of disorders related to the interaction between a cell receptor and a ligand such as in hypercalcaemia.

The receptor a G-protein linked receptor having 7 transmembrane domains. It induces an increase in intracellular cAMP and calcium upon challenge with PTH or PTHFP. Recombinant receptor can be produced in vector/host cell systems and used in the treatment, diagnosis or prognosis of e.g. hypercalcaemia and hypocalcaemia, to screen for (ant)agonists and to raise antibodies. Host cells expressing the receptor are used for diagnostic measurement of PTH serum levels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNA encoding vertebrate parathyroid hormone receptor - useful for diagnosis and treatment of e.g. hypercalcaemia, hypo-calcaemia,

This sequence represents the opossum parathyroid hormone (PTH) receptor OK-O, which is targeted by the antibody of the invention. The antibody of the invention is immunoreactive with naturally occurring human, rat or opossum PTH receptor. The antibody is useful for treating disorders characterised by overstimulation of PTH receptors by their ligand and for the diagnosis of PTH-related hypercalcaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New DNA encoding parathyroid hormone receptor, DNA and antibodies - for (differential) diagnosis of hypercalcaemia, and diagnosis
                                                                                                                                                                        Antibody to parathyroid hormone receptor - for diagnostic or therapeutic use

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0
                                                                                                                                                                                                                                                                                                                                                                                                                        Parathyroid hormone/parathyroid hormone-related protein (PTH/PTHIP) receptors (R92735 and R92776) are encoded by CDNA clones OK-H (T15945) and OK-O (T15946), respectively, isolated from an opposum kidney (OK) cell cDNA library. OK-H and OK-O may be the products of 2 separate genes or of a laboratory artifact. The receptor induces an increase in intracellular cAMP and calcium when challenged with PPH or PTHIP. Recombinant receptors can be produced in vector/host cell systems and und hypocalcaemia, to screen for (ant)agonists of e.g. hypercalcaemia and hypocalcaemia, to screen for (ant)agonists and to raise antibodies. Most cells expressing the receptor can be used for diagnostic

The antibody of the invention is immunoreactive with naturally occurring human, rat or opossum PTH receptor. The antibody is useful for treating disorders characterised by overstimulation of PTH receptors by their ligand and for the diagnosis of PTH-related hypercalcaemia.
